## **NAME**

curl\_multi\_init - create a multi handle

## **SYNOPSIS**

#include <curl/curl.h>

CURLM \*curl\_multi\_init();

# **DESCRIPTION**

This function returns a CURLM handle to be used as input to all the other multi-functions, sometimes referred to as a multi handle on some places in the documentation. This init call MUST have a corresponding call to *curl\_multi\_cleanup(3)* when the operation is complete.

# **RETURN VALUE**

If this function returns NULL, something went wrong and you cannot use the other curl functions.
